Links

ROM: Havoc-OS - Latest Official Build
Recovery: Official TWRP
Open GApps: https://sourceforge.net/projects/opengapps/files/arm64/
Magisk: Magisk
Factory Firmware: Stock Firmware Mirror

"Copy Partitions Zip" - courtesy of @filipepferraz
copypartition.zip
(To setup "Slot B")

Installation

01. Download the ROM, Firmware and GApps from the links above.
02. Use terminal to boot latest twrp.img "fastboot boot twrp.img"
03. Create backup. i.e. EFS / Persist and put somewhere safe.

YOU ONLY NEED THIS STEP ONCE.. When updating Firmwares
04.At this point Flash "Copy Partitions Zip" In TWRP "SLOT A"

05. Flash the ROM and TWRP installer.
06. Choose Reboot -> Recovery
07. Install GApps & Magisk.
08. Reboot -> Bootloader
09. fastboot -w
10. Reboot and Enjoy.

*Note-1: Slots, ROMS install to opposite (inactive) slot
If you FLASHED ROM from "Slot A", then ROM is installed to "Slot B", If you Flashed ROM from "Slot B", then ROM is installed to "Slot A"

*Note-3: Updating "Dirty Flash"
01. Flash ROM + TWRP installer.
02. Reboot -> Recovery
02. Install Gapps + Magisk
03. Reboot -> System

I downloaded and installed this rom today. Was testing around and I notice tw possibleo bugs. 1. Is that my FOD doesn't work and the second thing is that when I decrease the screen brightness to minimum, my phone screen becomes black like the screen is off but it isnt, also cant use adaptive brightness for that reason. I attached a video to show a demonstration of the issue. https://drive.google.com/file/d/1-6-yufcDcivPQOyPkAm3ogkEOQvzcZo9/view?usp=drivesdk

Thanks for feedback + video
Much appreciated!
I was having issues releasing update due to some sensor error. Now I know what the problem likely I Is tied to.

Are you referring to AOD?

On my edge, yesterday (Sunday) morning: Havoc was a snap to install, root, config...everything was fine except for the phone service part. I had no phone service. Phone service, from verizon, that I usually get, was a no-go. Not only did I check to see if it was plugged in, I also turned if off and then back on again. (NO? Lol...)

Initially, I could 'do a thing' and phone service was restored. However, this was short-lived as 'the thing' was an unreliable kludge and stupid and WTF - Also, android 11 convolutes and/or wrecks things about android 10 that I like. I went back to Lineage. Then, I had a pleasant phone call with a buddy because I had phone service, which, was pretty cool, because, I was using a phone.

US carriers, always a hassle.
Anyhow, a log is always helpful 😉👍

Hello everyone! I just have a small question regarding this ROM. And I think some Edge users would also like to know the answer. As some of you know, the latest official update to Android 11 broke the waterfall screen on our Motorolas. The screen is not fully populated by the applications, instead, the waterfall edges persist black. This is a bit of faux pas from Lenovo's / Motorola side as the main point of this phone are these enormously curved screen edges. They keep telling me that this is not their fault but Android 11 Waterfall API and app developers. Does the same issue occur in this ROM?

Sho 'nuff.

I would care at all about a log, troubleshooting, and fixing if this were my only ROM choice, but, it's not. Also, I don't have time for that. I'll try Havoc again after 4.6.

Jul 27, 2021

Hi there! I got an issue when installing TWRP recovery. After the installation and rebooting to recovery I cannot use the touch screen and thus cannot continue further actions.

How did you install twrp?
I would advise against using the twrp installer zip as this happens.. You should just manually fastboot flash recovery_<a/b> twrp.img

> What's the deal with the .bin file in the ROM archive?

This new A/B update mechanism introduced a new format for the Android OTA/Firmware update files. Earlier, these update files or packages came with partition images, which could easily be extracted and used for manual flashing. But now, these update packages come with a single 'Payload.bin' file that contains the individual partition images.

Well..I wanted to try this as my first custom from for my new moto edge..but, no matter what procedure I follow, after flashing this rom it will only boot to fastboot. But when I flashed LOS 17.1 that one booted just fine

I'm still on old firmware (Oreo). Do I need to take the OTA update to Android 11 and update the bootloader to use this one or something?

2   **SyberHexen**

> skuppej said: ↩
>
> It's possible to flash back to an older version of stock FW after taking the OTA to the latest? Really? I thought once the bootloader is upgraded then there's no going back?

2   **CyprienZee**

Same here, I just can't get it to boot. Keeps launching bootloader mode again and again. Can anyone explain to us step-by-step how things should be done with this? I am currently on fresh Android 11 Stock, but after flashing it does not boot either.
